Figure 4-1: Structure of the model

Why was it created?

- Show monetary value of Green infrastructure
- Help to make the case for investment
- To support project managers
- To show what could be done!

Elements of the Toolkit

- Tool Index
- Double Counting
- Project data
- The tools
- Value Library
- Assessments

<http://bit.ly/givaluationtoolkit>

Tool Index

Tool index

Benefit groups	Functions	Tools	Tool Outputs			Recommended timeframe for value assessment	
			Monetary	Quantitative	Qualitative		
1. CLIMATE CHANGE ADAPTATION & MITIGATION	Shelter from wind	1.1 Reduced building energy consumption for heating	☐	☐	■	<i>Monetisation and quantification functional for residential properties only</i>	10 years
		1.2 Avoided carbon emissions from building energy saving for heating	☐	☐	■	<i>Monetisation and quantification functional for residential properties only</i>	10 years
		1.3 Avoided damage from wind and storms	✗	✗	■	<i>Monetisation and quantification require further research</i>	t.b.d.
	Reduction of urban heat island effect	1.4 Reduction of peak summer surface temperatures	✗	■	■	<i>Monetisation requires further research</i>	t.b.d.
	Cooling through shading and evapo- transpiration	1.5 Reduced energy consumption for cooling	■	■	■		10 years
		1.6 Avoided carbon emissions from building energy saving for cooling	☐	☐	■	<i>Monetisation and quantification functional for green roofs only</i>	10 years
	Carbon storage and sequestration	1.7 Carbon stored and sequestered in woodland and forests	☐	☐	■	<i>Monetisation and quantification functional for broadleaf woodland only</i>	50 years, benefit accrual period 20-25 years with new tree planting
		1.8 Carbon stored and sequestered in non-woodland based landscapes	✗	✗	■	<i>Monetisation and quantification require further research</i>	t.b.d.
2. WATER MANAGEMENT & FLOOD ALLEVIATION	Interception, storage and infiltration of rainwater	2.1 Energy and carbon emissions savings from reduced stormwater volume entering combined sewers	■	■	■		30 years
		2.2 Reduced wastewater treatment costs for domestic and commercial water customers	■	■	■		30 years
		2.3 Avoided costs of traditional water drainage infrastructure	✗	✗	■	<i>Monetisation and quantification requires access to average construction costs data</i>	30 years

Double counting

Potential for double counting

Tools that produce monetary outputs	1.1	1.2	1.5	1.6	1.7	2.1	2.2	4.2	4.6	5.1	7.3	8.1	8.2	9.1	10.1	11.2	Within tool

11.2 Employment supported by land management	Green	Green	Green	Green	Green	Green	Green	Green	Green	Green	Green	Green	Green	Green	Green	Green	Green

 Potential for double counting probably exists - use of both tools is not advised
 Potential for double counting probably does not exist

What data does the toolkit need?

- The increase in Green Infrastructure
 - Taking additional and displacement into account
 - May just be trees
- Numbers of people
- Numbers of businesses
- Access created
- Average house prices
- Capital and revenue costs of proposed GI
- Additional local data - IF AVAILABLE

Project Data

Project data

	Before	After		
Project area	n.a.	0	ha	Linked to tool 1.4
Total area of greenspace	0	0	ha	Linked to tools 1.4, 2.1, 4.7 and 10.1
New green space created by the project	n.a.	0	ha	Linked to tools 2.1, 4.7, 5.1
Pre-existing area of greenspace enhanced by the project	n.a.	0	ha	Linked to tool 5.1
	Before	After		
Tree cover	0	0	ha	Linked to tools 1.7
Area of new woodland created	n.a.	0	ha	Linked to tool 1.7
Total area of green roofs	0	0	sq.m	Linked to tool 1.5
including: area of intensive green roofs	0	0	sq.m	Tool 2.1
area of semi-intensive green roofs	0	0	sq.m	Tool 2.1
area of extensive green roofs	0	0	sq.m	Tool 2.1
Current land use				Context only
Project context eg inner city, urban or rural area (or a mix of all)?				Context only
Land ownership?				Context only
What is the level of deprivation in the area? Refer to IMD data				Context. Can contribute to business case.
Is there currently a lack of green space in the area? Refer to local open space audit results and associated open space standards. Refer to national benchmarks such as ANGST standards. How will this project help?				Context. Can contribute to business case.
Does the site have heritage value? What features are being enhanced/protected/ promoted through the project?				Context. Can contribute to business case.
	Before	After		
Cycle routes	0	0	km	Linked to tool 4.2b
Current cycle routes upgraded	n.a.	0	km	Linked to tool 4.2b
Footpaths	0	0	km	Linked to tool 4.2a
Footpaths upgraded	n.a.	0	km	Linked to tool 4.2a
Is the land publicly accessible?				Context only
Is the site currently well connected or remote?				Context only
Will the project improve green travel options?				Context. Can contribute to business case.
Assessment of transport impact conducted?				Context. Can contribute to business case.

1. Climate Change Adaptation and Mitigation

1.1 Reduced building energy consumption for heating

Residential buildings with large trees < 10	0	<i>Insert number of properties qualifying</i>	<i>Requires manual input</i>
Energy saving for residential properties	0	kWh (gas)	<i>Uses data feeds from Values Library.</i>
Commercial buildings			<i>Requires further work</i>
Energy saving for commercial properties			<i>Requires further work</i>
Tool 1.1 output	0	£/yr	<i>Auto-calculation cell. Only accounts for residential properties</i>

4. Health *(tools 4.1 & 4.2)*

1.2 Avoided carbon

CO2 saving

Tool 1.2 output

4.1 Health costs savings from increase in physical activity

Refer to the User Guide for qualitative evidence.

Requires further work for developing a monetisation tool

4.2a Reduced mortality from increased walking

This tool is in two parts. Scroll down to find [4.2b](#)

Judgment needed before proceeding: Will the new / enhanced green infrastructure asset be capable of encouraging at least 3 hours of exercise per week for users? If not, this tool does not apply.

1.3 Avoided damage

Refer to the User Guide

	Before	After	
Number of households <300m	0	0	<i>From Project Data sheet (cell D32 and D36)</i>
Number of households <1200m	0	0	<i>From Project Data sheet (cell E34 and E38)</i>
Number of local residents <300m	0	0	<i>From Project Data sheet (cell D34 and D38)</i>
Number of local residents within 301-1200m	0	0	<i>From Project Data sheet (cell E34-D34 and E38-D38)</i>
Number of local residents beyond 1200m	0	0	<i>Input required</i>

Existing pedestrian routes
New pedestrian routes
Upgraded pedestrian routes

5. Land and Property Values

5.1 Residential land and property value uplift (<450m from green space)

Potential number of properties benefiting	-	<i>From Project Data sheet (cell F36)</i>
New green space created	0 Ha	<i>From Project Data sheet (cell E6)</i>
Of which high quality 'city park'	0 Ha	<i>Requires input</i>
Of which quality 'local park'	0 Ha	<i>Requires input</i>
Green space enhanced	0 Ha	<i>From Project Data sheet (cell E7)</i>
Of which high quality 'city park'	0 Ha	<i>Requires input</i>
Of which quality 'local park'	0 Ha	<i>Requires input</i>
Average property price	0 £	<i>From Project Data sheet (cell D67). For reference, average residential Source: 2008 HM Land Registry</i>

Values library

1. CLIMATE CHANGE ADAPTATION AND MITIGATION	Value			Units	Date	Source
	Low	Mid/average	High			
Max surface temperature and evaporative fraction		$T=22.3(1/(EF+0.53))+2.2*EF+0.9$			2006/2010	curve fitted to data from Dr Susannah Gill
Average UK household energy consumption (electricity)		4,800.00		kWh	2007	www.carbonindependent.org, BERR Energy Trends December 2007 www.berr.gov.uk/files/file43304.pdf
Average UK household energy consumption (gas)		16,000.00		kWh	2007	www.carbonindependent.org, BERR Energy Trends December 2007 www.berr.gov.uk/files/file43304.pdf
CO2 emission factor of grid electricity		0.537		kg/kWh	2010	Defra/Carbon Trust
CO2 emission factor of natural gas		0.203		kg/kWh	2010	Defra
Domestic electricity price		15.5		p/kWh	2013	https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/26
Domestic gas price		4.7		p/kWh	2013	https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/26
Commercial electricity price		7.3		p/kWh	2012	https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/26
Commercial gas price		2.3		p/kWh	2012	https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/26
Average energy savings (heating) domestic		0.03		%	2010	Combined average from sources
Average energy savings (heating and cooling) commercial		0.08		%	2010	Combined average from sources
Average efficiency, air conditioning		33%		%	2006	Evaluating Green Roof Energy Performance - Jeffrey Sonne, Ashrae Journal 2006
Green roof, heat dissipation		150		w/m2	2010	University of Manchester workshop, April 2010
Social value of carbon		6.0		£/tonne	2013	Mid value: was based on Stern £27/t, raising at 2% per annum. As recommended by DECC, Carbon Valuation in UK Policy Appraisal, 2009 (use as default in calculation). Now based upon http://www.forestry.gov.uk/fr/INFD-7WTDJU. High value: £53/t, recommended by DEFRA 2012

2. WATER MANAGEMENT AND FLOOD ALLEVIATION	Value			Units	Date	Source
	Low	Mid/average	High			
Water industry energy use for wastewater treatment		645		kWh/Megalitre	2010	Water UK
CO2 emission factor of grid electricity		0.537		kgCO2/kWh	2010	Carbon Trust
Commercial electricity price	4		12	p/kWh	2010	Estimate
Social value of carbon		53		£/tonne		Defra (raising at 2% per annum)
Surface water drainage site area charges (United Utilities)	See data table 2.2 in Water sheet			£	2009/2010	United Utilities, www.unitedutilities.com/siteareacharges.htm
Surface water rebate to domestic customers (Welsh Waters)		45		£/yr	2011/12	Welsh Water

Assessments

SUMMARY OF ECONOMIC VALUE			
BENEFITS	BENEFIT MONETISATION		
	GVA value	Land and property value	Other economic value
1 Climate Change Adaptation & Mitigation	£0	n.a.	£0

11 Land management	£0	n.a.	n.a.
TOTAL ECONOMIC VALUE OF BENEFITS	£0	£0	£0
These three figures should not be added together, as they represent different kinds of value			

SUMMARY OF QUANTITIES			
BENEFITS			BENEFIT QUANTIFICATION
Benefits groups	Functions	Tools	
1 Climate Change Adaptation & Mitigation	Shelter from wind	1.1 Reduced building energy consumption for heating	0 kWh/yr energy saved
		1.2 Avoided carbon emissions from building energy saving for heating	0 kgCO ₂ /yr not emitted
	Reduction of urban heat island effect	1.4 Reduced peak summer surface temperatures	0 °C in surf. temperature reduction
		Cooling through shading and evapo-transpiration	1.5 Reduced building energy consumption for for cooling
	Carbon storage and sequestration		1.6 Avoided carbon emissions from building energy saving for cooling
		1.7 Carbon stored and sequestered in woodland and forests	0 kgCO ₂ sequestered
	2 Water management & Flood Alleviation	Interception, storage and infiltration of rainwater	2.1 Energy and carbon emissions savings from reduced stormwater volume entering combined sewers
3 Place & communities	Catalyst for community cohesion and pride	3.2 Increase in volunteering	0 new volunteers
4 Health & Well-being	Provision of attractive opportunities for exercise	4.2 Reduced mortality from increased walking and cycling	0.00 lives saved per yr
		Air pollution removal	4.6 Avoided costs for air pollution control measures

Values for GVA, Property and non market values

The Toolkit is not

- Perfect!
- A replacement for a full Cost Benefit analysis
 - But may indicate the value of spending a lot of money on CBA
- Simplistic
- A “black box”
 - Knowledge of the economics, models, assumptions and limitations important in being able to justify the valuation

It is...

- Straight forward to use
- Based on peer reviewed models and published values
- Wide ranging in scope
 - All green infrastructure
 - 11 economic benefits
- Quick
- Sensible
- Used in practice
- In its third revision
- Continuing to be developed

Some examples

Indicative Economic Assessment

A quantification and valuation of the economic benefits of a proposed programme of improvements to the green infrastructure in the areas around the development at Wirral Waters

August 2011

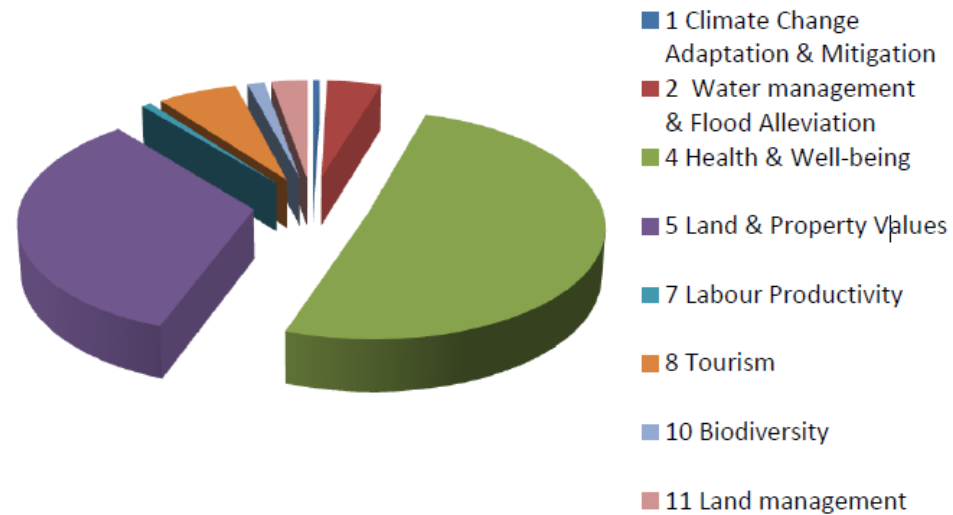

Western Approaches – tree planting connecting pedestrian, cycleway, rail and road approaches from the west to West Float and East Float. Bidston and Birkenhead North Stations, and the M53 are key approaches and arrival points into Wirral Waters, Wallasey and North Birkenhead

Result for Green Streets Wirral Waters

- Investment €2m
- Contribution to **GVA** - for Wirral Waters the toolkit identified value of **€15m**
- **Wider economic benefit** - For Wirral Waters the toolkit identified value of **€20m**

BENEFIT QUANTIFICATION

Benefits groups	Functions	Tools		
Climate Change Adaptation & Mitigation	Shelter from wind	1.1 Reduced building energy consumption for heating	480000	kWh/yr energy saved
		1.2 Avoided carbon emissions from building energy saving for heating	97440	kgCO2/yr not emitted
	Reduction of urban heat island effect	1.4 Reduced peak summer surface temperatures	25.30	Co in surf. temperature reduction
	Cooling through shading and evapo-transpiration	1.5 Reduced building energy consumption for cooling	0	kWh/yr energy saved
		1.6 Avoided carbon emissions from building energy saving for cooling	0	kgCO2 not emitted
	Carbon storage and sequestration	1.7 Carbon stored and sequestered in woodland and forests	9.36	kgCO2 sequestered
Water management & Flood Alleviation	Interception, storage and infiltration of rainwater	2.1 Energy and carbon emissions savings from reduced storm water volume entering combined sewers	168000000	L/yr water diverted from sewers
Places and communities		3.2 Increase in volunteering	400	new volunteers
Health and Wellbeing		4.2 Reduced mortality from increased walking and cycling	0.717025216	lives saved per yr

€2 million
investment
in GI

€15
million
GVA

€35 million of
total economic
value

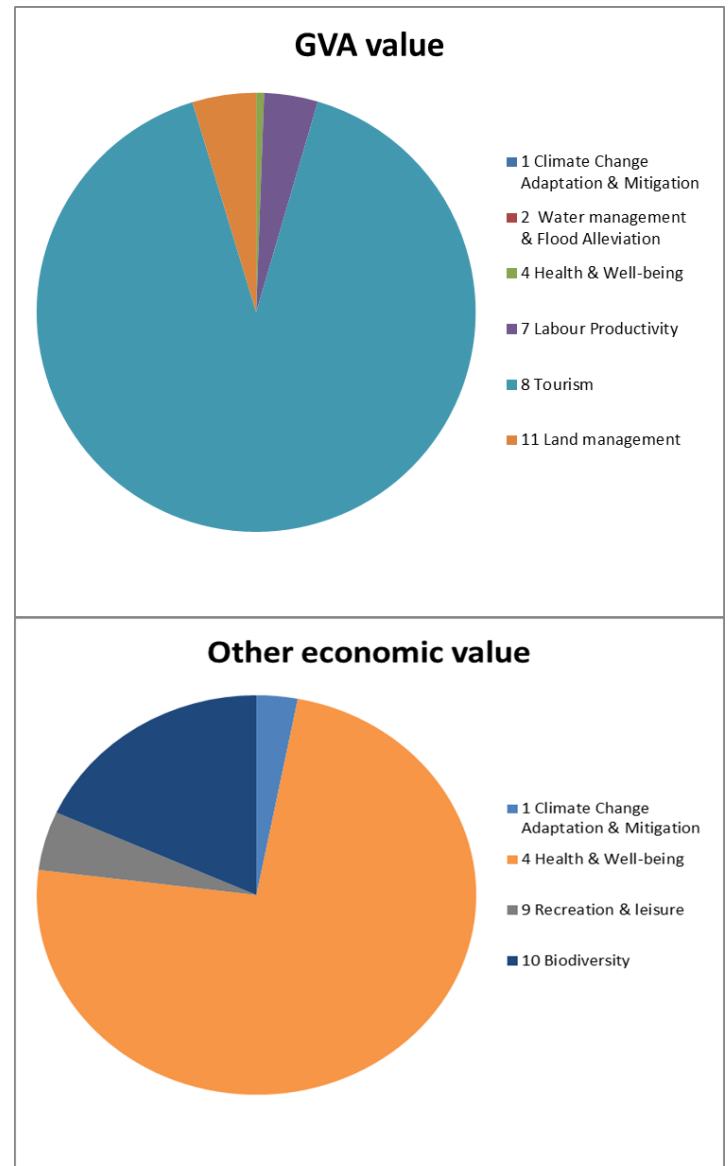

300ha community woodland

Contribution to GVA –€14m

Impact on property value –€11m

Other economic benefit - €36m

Getting more from trees

This year we planted over 20,000 trees in The Mersey Forest area.
But what does this mean in real terms for people, wildlife and the economy?

In 2013/14 our activities led to...

20,531

trees planted in Merseyside
and North Cheshire

including...

543
hedgerow trees

1471
street trees

521
events held by
The Mersey
Forest Team

leading to

12471
people
engaged in our
activities
across the area

But what does this all mean?

Planting 20531 trees has wide-ranging and long term benefits....*

370,000

litres of water diverted
from the sewers each
year, helping to avoid
flooding

45
tonnes

of CO₂ sequestered
per year, mitigating
climate change

10kg
CO

50kg
NO₂

50kg
SO₂

gases removed from the
air each year, improving
air quality

... among other benefits, including habitat for wildlife, setting the scene for investment and providing places for recreation.

*The data provided in this infographic is based on calculations made using the Green Infrastructure Valuation Toolkit, which can be found at bitly/givaluationtoolkit

NOISIEL PARK

Assessing returns on landscape management

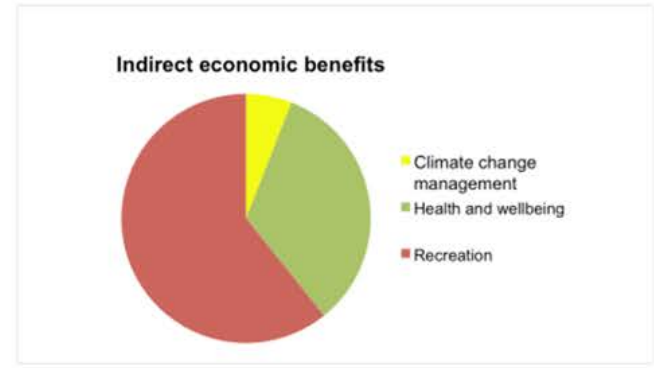

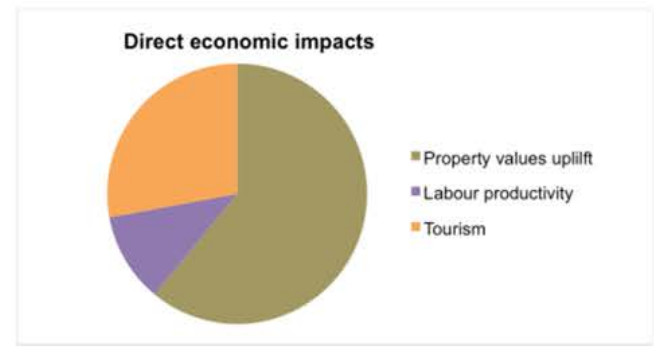

Courtesy of
Anne Jaluzot

- Benefits that could be monetised:**
- Health and wellbeing
 - Recreation
 - Property values
 - Tourism
 - Climate change management
 - Labour productivity

- Benefits that could only be quantified or qualified:**
- Up to 6C degree cooling impact
 - Community cohesion
 - Marne ecological corridor
 - Attractive image
 - 190ML stormwater intercepted

Good bits

- First toolkit of its type – aimed at projects at landscape and local levels and attempts to assess a wide range of benefits.
- Talks the language of economic development and regeneration.
- Shows Net Present Value
- Recognised models
- Capable of producing useful information to help get a better picture of the broad value of a project.
- Quick to use
- Latest version tackles many early criticisms
- Seems to be acceptable even with caveats

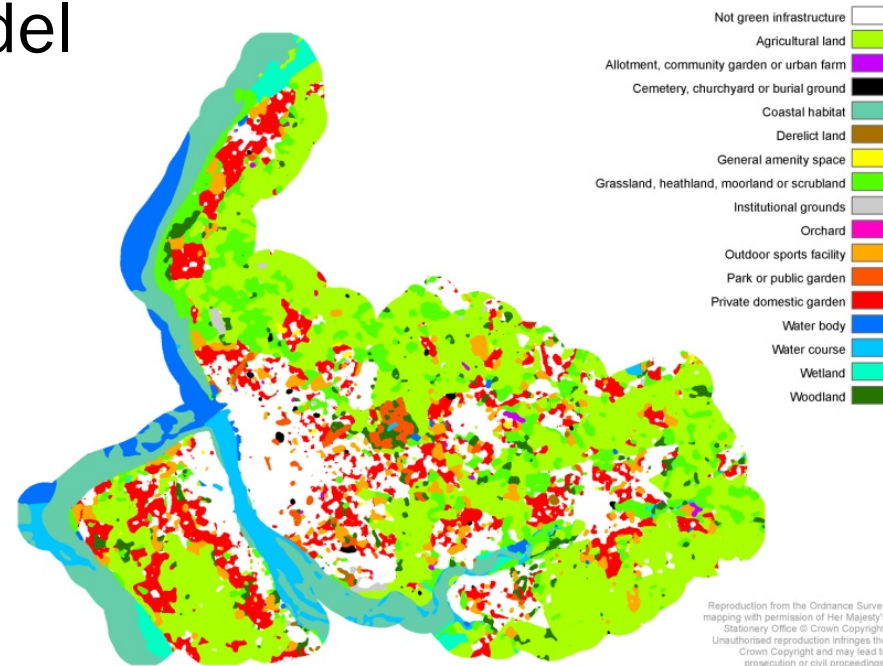

- Extensive use of benefit transfer – but problems with evidence transferability.
- Problems with evidence robustness for some tools
- Not all benefits have tools available – evidence gap
- Does need some understanding of the underlying economics
- Needs to be sense checked – is this value likely?
- Range and sensitivity gaps.

What next?

- PhD underway that will
 - Look to update the model
 - Link to Geographic Information System
 - Potential for scenario modelling
 - Potential for Dynamic Interactive Cost Benefit assessments
- Continue to update based on latest research/models

Beyond Valuation - Our next adventure!! Or the next door.

- **GI increasing Land value** - encourages investment generally and allows sites to more easily be brought forward for development.

$$IRR = r_1 + \frac{(NPV_1) \times (r_2 - r_1)}{(NPV_1 - NPV_2)}$$

- **Reducing the time to development /reducing voids**– bringing forward the date at which income is received.

$$NPV = \sum_{t=0}^n \frac{CF_t}{(1+r)^t}$$

Thank You
