

(Re)Discovering the Emerald Necklace

Colentina River, Bucharest, Romania

INTERNATIONAL STUDENT COMPETITION

The major challenge of this competition is the scale: 25 kilometres of a complex urban periphery connected by a chain of natural and artificial lakes, marked by strong contrasts at various levels: functional, ecological, socio-cultural, ethical, aesthetic, heritage, economic and many more.

The competition aims to support integrated and holistic approaches to the urban and peri-urban landscape through multidisciplinary student teams elaborating planning and design proposals at various scales.
